

LANDSCAPE COLLECTION

Inspired Living

Beautiful driveways and walkways, inviting patios, natural stone walls, fireplaces and more.

SHAWBRICK.CA

Style, Quality & Expertise

With over 150 years of experience in creating outstanding brick and stone products, Shaw Brick offers you a world of choice in our Landscape Collection. It presents a vast array of hardscape solutions that capture and enhance natural beauty with patterns, colours and styles that will inspire outdoor living projects of every type.

Whatever style you are looking for – country charm, old world elegance or urban sophistication – you can create whatever your heart desires: driveways with curb appeal, relaxing patios and outdoor living rooms, serene garden walkways, peaceful fountains, sturdy retaining walls, or warm and inviting outdoor fireplaces.

No matter which products you select, rest assured that your project will be off to a great start when it is built on a foundation of Shaw Brick style, quality and expertise.

Pavers

Offering innovative designs, a wide variety of styles and a host of colours, the Shaw Brick Paver Collection will inspire you to make any outdoor living space your own. If you're looking for a distinctive driveway, a charming heritage terrace, a warm and inviting patio, or a serene walkway through your urban garden – we have a solution for you.

Our premium quality Pavers are distinctive and durable, with the added bonus of outlasting other landscaping alternatives, which will greatly enhance the character and value of your home.

Natural Stone

Modern outdoor living spaces that combine the raw beauty of nature with all the comforts of home are becoming increasingly popular. Creating them with authentic Natural Stone – including sandstone, limestone, slate and granite – is a big part of this trend. The Shaw Brick Natural Stone Collection features a host of new, in-demand products that combine the elegance of nature with superior functionality and durability to create stairs, walls, slabs and more.

Natural Stone products undergo less processing, making them a more environmentally-friendly choice. There is a broad variety of colours and textures – please visit a Shaw Brick Retail Centre or shawbrick.ca for additional choices not shown in this catalogue.

RANDOM FLAGSTONE, SCOTIA SLATE

Random Flagstone

Random Flagstone has a unique and distinctive look. Create random patterns with the irregular contours and surfaces of this natural stone. Create a project that feels like it has always been part of your home's landscape.

ANTIQUÉ GREY LIMESTONE

SCOTIA SLATE

ANTIQUÉ RED LIMESTONE

CITADEL BLACK PIER CAPS

Pier Caps

Pier Caps (also called as Column Caps or Column Copings) caps offer a final touch to bare columns of entryway or fence posts. Post Lights can be mounted on these column caps to accentuate the space. Pier Caps also cover the column to save masonry work from weathering and extremes of climate such as rain & snow. Stone Pier Caps give a royal touch to your landscape walls, entry columns, and more creative landscaping spaces.

NATURAL

Beonstone

ELEGANT | No other product has more style.

Give your home the distinctive beauty you have always dreamed of. All of our trendy European siding perfectly reproduces the look of natural stone and is synonymous with elegance and comfort. Available in four unique collections that blend perfectly with most current materials for a simply spectacular result!

EASY TO INSTALL | Nothing installs easier or better.

When it comes time to renovate, you will be amazed how easy it is to install Beonstone products. The stone siding panels are light and easy to handle. Just set them in place and screw them on. It's that simple! In just a few hours, the architectural style of a room or even your whole house will have a fresh new look!

PERFECT ADDED VALUE | Nothing offers greater value.

The distinctive and warm appeal of natural stone is available for a fraction of the cost! No one will be able to tell the difference—you alone will know that the secret is Beonstone panelized stone siding.

HIGH-PERFORMANCE | Beonstone—the ideal product!

Durable and versatile, Beonstone panelized stone siding products are designed for both interior and exterior applications, thanks to their integrated drainage system. No particular structure is required: the siding you choose can be installed directly onto a standard framed wall and works with any type of building. Thinking of renovating or building? Beonstone is the perfect choice for any project.

50-YEAR WARRANTY

Beonstone panelized stone siding is remarkably durable. For this reason, the structural integrity of the concrete and the performance of Beonstone architectural panels are guaranteed for 50 years from the date of purchase when installed in accordance with applicable codes and procedures on a structure that meets local building codes.

BASE THICKNESS CHART* (GENERAL)

APPLICATION	GRAVEL BASE	BEDDING COURSE
Patios, Walkways, Pool Decks	4" - 6"	1"-1.5 "
Driveways	6"-12"	1"-1.5 "
Steps, Planters, Raised Patios	6"	0-1/8 "

***Soil Conditions** - When working in areas where there are poor soil conditions (e.g. heavy clay, disturbed soils) there is potential for deformation or settlement. Increase the depth of the base to provide more stability. Remove any loose or disturbed soils.

Step 1

BASE PREPARATION

Begin by marking out the area to be excavated. Excavating removes loose top soil or fill and allows for the placement of a compacted gravel base. Always excavate the area slightly wider to allow extra room.

In clay soils we strongly recommend using a geotextile material to keep soil and gravel apart. This will provide improved drainage and yield greater, long term stability.

Fill the area with the correct amount of gravel (see "Base Thickness Chart"). Grade your base material as closely as possible to the final contour of your patio, walkway or driveway surface. Remember to slope all installations away from the house for proper drainage.

Step 2

COMPACTING THE GRAVEL BASE

The base preparation is the most important part of the entire installation process. Appropriate base material, thickness, and compaction are essential to ensure your installation will last a lifetime. Use either a hand tamper or plate compactor and firmly compact the gravel base material. For best compaction, compact in 4" layers.

Step 3

SCREEDING

Pavers are laid on a bed of coarse sand. This bed should be 1" to 1-1/2" thick, no more, and is placed directly on top of the compacted base material. Using screed guides (1" to 1-1/2" in diameter) placed on the base, level the sand evenly by pulling a straight board along the guides. Once you've completed an area, remove the guides, fill in the grooves, and continue screeding.

Step 4

LAYING & CUTTING THE PAVERS

Begin placing the pavers directly on the screeded bed of sand. Start laying along the longest straight side of the area to keep lines straight. This will minimize the amount of cutting required. It is important that the lines of your pavers are square, 90° to each other, to fit properly.

If you are installing circles, fans, or a soldier course (a border of pavers around the perimeter of the area) you will want to place these first before installing the rest of the pattern.

You may need to cut pavers that don't fit along edges or around objects. Mark the pavers and cut with either a guillotine cutter or masonry saw.

A guillotine cutter is the easiest method of cutting but for an exact cut, a masonry saw works best.

Tip

Edge restraints are a critical element to the durability of a paver installation. They prevent the pavers from moving and shifting over time. If you are using PVC edge restraint or similar, it should be installed after all pavers are in place.

Step 5

INSTALLING EDGE RESTRAINTS

It is important that the edging be installed on the compacted gravel base, not on the screeded sand layer. Carefully remove sand from edge of pavers. Place plastic edging against pavers and spike into the ground at approximately 1 foot intervals. (Holes are predrilled in edging.) Use 10" non-galvanized common spikes. These spikes will corrode and become locked into soil.

Step 6

COMPACTING THE PAVERS

After the installation is complete, including edge restraints, the pavers must be swept clean and then compacted with a plate compactor. This helps settle the pavers into the bedding sand and creates a smooth, flat surface.

Step 7

POLYMERIC SAND

Sweeping Polymeric Sand into the joints of the pavers further locks the pavers together. Continue to run the plate compactor over the pavers adding sand and compacting until the joints are full. This will help the sand settle deep into the joints. Please follow manufacturer's instructions for setting Polymeric Sand.

Patio Stones Installation

SUPPLIES

- Chisel
- Mallet
- Level
- Shovel
- Stakes & String
- Sand
- Patio Edge Restraint
- Safety Glasses/ Gloves
- Tamper
- Broom
- Granular "A" Crushed Stone

Patio Stones are easy to install for patios, pool surrounds and walkways.

Step 1

Mark the proposed area for excavation. In general excavate the area to an approximate depth of 4"-6".

Step 2

Fill excavated area with approximately 4" of granular "A" crushed stone.

Step 3

Compact crushed stone with a vibrating plate tamper. This will provide a firm base and allow water to drain.

Step 4

In clay soils we strongly recommend using a geotextile material to keep soil and gravel apart. This will provide improved drainage and yield greater, long term stability. Complete the base by adding 1" of bedding sand to achieve a smooth working area. Try to achieve a 2" slope approximately every 10 feet away from the foundation to assist with water drainage.

Step 5

Lay 1 to 2 rows of Patio Stones. Check the grade with a level to ensure proper drainage. Continue laying Patio Stones in the desired pattern.

Cross Section

Note: Patio Stones are recommended for pedestrian traffic only.

Garden Wall Installation

SUPPLIES

- Chisel
- Mallet
- Shovel
- Gloves
- Wheelbarrow
- Carpenter's Level
- Stakes & String
- Concrete Adhesive
- Tape Measure
- Safety Glasses
- Gravel

Install your garden wall in a few simple steps. Determine the square feet of your garden wall, then calculate the number of units required to complete your project.

Step 1

BASE PREPARATION

Once you have drawn up plans and marked off the site of your garden wall project, dig a trench at least 8" deep by 16" wide by the desired length. Compact gravel in the trench and fill to a depth of 6" to withstand loading on the surface and seasonal frost from below.

Step 2

THE FIRST ROW

Lay the first level of blocks on the completed gravel base, making sure the units are level from side to side and front to back. Bury half of the base block.

Step 3

ADDITIONAL ROWS

Stack additional rows by staggering the units along the wall to your desired height. Apply adhesive on the last course to adhere to **CAPSTONES**. Then fill your garden wall or planter with soil.
