CANSO ROCKET STOVE

The Canso Rocket Stove provides a one-of-a-kind camping cooking experience in your backyard.

It's a highly efficient small combustion stove with an intelligent design that makes use of any small fuel source such as twigs and small branches. The combustion chamber with a vertical chimney provides a highly efficient design that ensures nearly complete combustion. The design concentrates the heat in a smooth stream upwards, generating the necessary heat you need to boil lobster, corn, or anything else you want.

The Canso Rocket Stove has two access points - one on top for efficiently adding fuel into the chamber and one below to stoke the fire as needed.

Download the installation instructions in our Resources section <u>here</u> and, for expert help with your project, drop into one of the <u>Shaw Retail Centres</u> or one of our <u>independent dealers</u>.
