

## POLYMERIC SAND

### **Superior performance and durability in paver sand**

Polymeric Sand from Techniseal is a specially-formulated, high-performance mix of finely graded sand and a binding agent used to fill joints between pavers, including concrete pavers, brick pavers, and stone pavers. When water is added, the binding agent in this paver sand locks the sand particles together, which helps lock all of the pavers together.

Techniseal's Polymeric Sand offers superior performance and durability. It is ideal for the installation of pavers or slabs as well as replacing existing joints on sidewalks, patios, sloped driveways, or walkways.

### **Remains stable and flexible even in the most extreme weather**

Our Polymeric Sand will remain stable and flexible even in the most extreme weather conditions.
